Guarantee satacen®

satacen® is a FBC (Fuel Borne Catalyst) for Diesel engines equipped with Diesel Particulate Filters (DPFs). It is used to reduce the ignition temperature of the soot collected in the DPF.

The product should always be used in combination with a DPF-system.

This FBC contains an organic iron compound; which is soluble in diesel fuels.

The use of the FBC in Diesel engines at the individually prescribed dosage rate, with a maximum equivalent to 25 ppm of iron in the fuel, will not damage the engine.

If as a direct result of the use of the FBC, at the prescribed dosage rate, damage to the engine due to the use of the FBC should be proven, Innospec shall be liable for such damages with the scope of the coverage under its General and Product Liability Insurance. For the avoidance of doubt Innospec shall not be liable for consequential, special or indirect costs including but not limited to loss of profit, loss of goodwill or loss of business.

The maximum coverage amount for damage to an engine is 250,000 € per occurrence. Damages shall be limited to an annual total of 3.0 Mio €.
